3 OCT 1963

MEMORANDUM FOR THE RECORD

SUBJECT: Optical Tracking Requirement for Project [redacted]

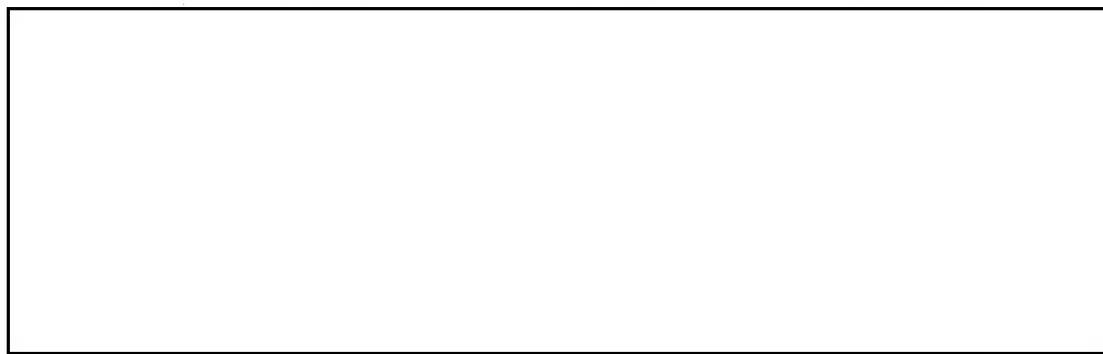

25X1A

25X1A 1. The requirement for optical tracking of the [redacted] and SA-2 missile has been the subject of recent critical review. This memo recaps recent conversations by [redacted] as the overall Project Officer.

b. A further discussion with [redacted] (OSA) indicated that a review of airborne optical equipment was made at the initial planning phases of Project [redacted] and at that time after a thorough study of existing optical systems, it was concluded that airborne optical tracking was not feasible principally because of the field of view and the requirement of gyrostabilization of the optical equipment.

25X1A c. In a discussion with [redacted] (OEL) 25X1A it was indicated that [redacted] (NRO) had determined several months past that naval operations in the northern portion of the Yellow Sea were not at this time feasible; therefore, naval platforms for theodolite equipment are not available for this Pyongyang exercise.

25X1A

d. [redacted] will continue to research this subject in an attempt to develop an airborne capability;

25X1A

however, it must be assumed at this time that optical tracking will not be a part of the Pyongyang mission. The requirement, as noted by [redacted] in a memo to DD(S&T) dated 30 July 1963, is still a valid but secondary requirement and therefore must be considered as such in this mission.

25X1A

e. [redacted] (OSA) was informally queried concerning this subject and has agreed to review it from his standpoint. He will contact [redacted] and [redacted]

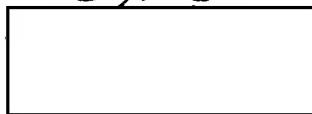

25X1A

25X1A

2. In view of the apparent lack of technical capability and the short time available for further development work, present operational planning will not include optical tracking for the Pyongyang mission.
